

Aboutus.html using Bootstrap

Introduction

This project is about using Front-End Web UI Frameworks and tools to design and develop web pages, which are responsive in nature.

By using bootstrap we can create a responsive web page with the help of predefined css style classes and javascripts.

Expected list of features

This project is expected to support responsive design layouts for various screen sizes.

By using Bootstrap classes we can create responsive webpages, which have different designs for different screen sizes. So it is easy to design a webpage based on the device or screen it will be viewed on.

Market Survey

There are lot of websites available today which make use of Bootstrap framework to implement responsiveness.

- NBA.com
- <http://Indeed.com>
- Walmart
- <http://target.com>
- Bloomberg Business
